

Chanto Air Hydraulics Co., Ltd.

F.R.L combination units, valves, compact guided cylinders, hydraulic products

Chanto Air Hydraulics Co. was founded in 1982 and has developed into one of Taiwan's most professional manufacturers of pneumatic components and hydraulic products.

The company stands out for its conscientious devotion to satisfying demanding customers from all over the world with unbeatable quality and high precision, and to the consistent improvement of manufacturing technology in cooperation with partners around the globe. Today, the company is an ISO9001:2008 manufacturer certificated by TUV Rheinland.

Bolstered by decades of experience in designing pneumatic and hydraulic equipment parts, Chanto builds a wide range of products that encompasses F.R.L (Filter-Regulator-Lubricator) combination units, valves, pneumatic cylinders, rotary actuators, tubes, air grippers, air-oil power cylinders, and fittings and accessories. Presses (including air models, hydropneumatic models, and pneumatic models) are also among its hot sellers, welcomed by professional buyers from different sectors.

Chanto's time-tested know-how and consummate production capability are embodied in the new products that the company introduces regularly. The recently launched GYS/GYB/GYR series magnetically coupled rodless cylinders, for example, feature long lifetime and low friction, along with a compact design that saves space.

The firm's BTF air hydro booster is another high-profile product; made of aluminum and hard anodized, it is lightweight, attractive, and easy to maintain. In addition, the booster has an NPN sensor and an LED indicator that make it easy to check action status. This produce offers greatly enhanced hydraulic pressure, and can replace conventional, noisy hydro-pneumatic intensifiers.

Chanto welcomes OEM (original equipment manufacturing) orders.
