

Tay Arng Co., Ltd.

OA chairs, hardware and components

Tay Arng Co., Ltd., located in Tainan of southern Taiwan and engaged in office chair making for more than 20 years, specializes in manufacturing office chair mechanisms, hardware and parts as chair back panels, spring cups, screws, suspension seat bases, pneumatic seat bases, pneumatic plate supports, armrest metal sheets, swivel plates, chair arms, chair tube connectors, armrests, seat brackets, iron plates for OA chairs, adjustable back supporters, and so on.

In the past decade, the company has exported around 95 percent of its annual output, mostly to North and Latin Americas, with its products all undergoing strict quality control throughout production, including impact and bending tests by SGS.

Besides the company also invests in developing on its own various useful gauges to effectively help workers keep deviations to minimum during each production process.

To ensure high quality, the company also emphasizes improving structural design and material application, mainly based on its knowledge of metalworking and molding. Such design improvement has paid off for SGS's test report shows Tay Arng's adjustable back supports, for instance, are structurally strong enough to be bent over 20,000 times.

Tay Arng's dedication to quality also shows in its consistent use of high-grade materials in production, despite relatively higher cost. For example, its chair backs are mostly made of reinforced synthetic mesh with 650 holes, compared to typical models with 450-500 holes, which achieve smoother surface for higher comfort and longer lifespan.

Tay Arng is confident of seeing robust growth in 2015, mainly because its devotion to quality has gradually brought back old customers over the past few years while also attracting ever more new clients across America.
